

## TO USE THE **mTweak** APP WITH YOUR MOMENTUM **mo8me** MIX ENGINE:

1. You need to install a Wi-Fi access point (WAP) to your Momentum network
2. The port that the WAP is installed to will need to filter the audio multicast on the network just like any other control device. The multicast MAC address is **01-15-AB-C6-00-00**.  
If you are unsure how to do this, refer to the white paper on network design from the Momentum website at:  
<<http://procomomentum.com/downloads/whitepapers/Network%20Design%20Whitepaper.pdf>>  
Because procedures and terminology differ from switch to switch, refer to your switch's documentation for specific procedures on multicast filtering/forwarding.
3. Once your WAP is properly installed, enable the desired level of access security following the WAP's documentation. The WAP can also be used to provide Wi-Fi access for a PC running the Momentum control software.
4. It's time to download the iPhone App from the Apple iTunes® App Store. Search the App Store for "**mTweak**" and download the app to your device.
5. Before opening the mTweak app, be sure the device's Wi-Fi is enabled and then open the app.
6. Upon opening the app, you must pick which Wi-Fi network you want to connect to, if more than one network is within range. Any access security settings will need to be entered at this time.
7. After connecting to the Momentum network, you must select which **mo8me** you want to connect with. If more than one mo8me is on the network, be sure to pick the one your mix resides on.
8. Next, pick your mix as the default mix.  
» You're ready to start "tweaking" your mix!
